

Teaching of mathematics

The mathematics course meets the curriculum of the European schools (<https://www.eursc.eu/en/European-Schools/studies/syllabuses>).

In order to harmonize knowledge between sections and ensure continuity with secondary school, a team of teachers has developed a teaching tool: the “Intermath”. These textbooks cover all the mathematical domains from P1 to P5 and are translated into the languages of all language sections.

Recently, the Intermath team sought to provide interactive resources directly related to the original Intermath tool. Presently students from P1 to P3 only can use Matific (<https://www.matific.com>). Indeed, each student from P1 to P3 is registered and has an identifier to access this site of mathematical games.

During lunch break, P2 and P3 pupils can go to the ITC room and connect to Matific.
